

Elias-Lacetera-Macis: **Paying for Kidneys? A Randomized Survey and Choice Experiment**, American Economic Review

The file ELM_final.dta contains the data (in Stata format) on which the analyses in the paper are based (except those reported in Section C of the Online Appendix). The dataset is in "long" form, with each row being an observation at the level of the respondent and transplant gain scenario (each participant received five transplant gain scenarios for the alternative procurement and allocation system to which they were assigned).

The files ELM_AUX1.dta ELM_AUX2.dta and ELM_AUX3.dta contain the data (in Stata format) on which the analyses in Sections C1, C2 and C3 the paper are based. The datasets ELM_AUX2.dta and ELM_AUX3.dta are in "long" form, with each row being an observation at the level of the respondent and transplant gain scenario.

The file ELM2018_final.do contains the Stata code that to perform the statistical analyses in the paper and in the appendix.

Interested researchers can inquire with the authors for the access to the original survey data and data construction code.
